WHY CHOOSE US?

Because we offer quality care, state-of-the-art technology, medical expertise, high-standard treatments, and the highest ratings in patient comfortortness.

+50
Medical specialities

+200
Internationally recognized medical professionals

We have more than 30 years of experience in the appocian of oncological pathologies to cover prevention/screenings, diagnosis, and the best innovative treatments.

In addition, we stand out for **our clinical research and continuous training through research and development, and academic activities** to train future professionals.

State-of-the-art technology

We acquire high-end equipment for more accurate results

Internationally recognized breast center

Accredited by the Argentinean Society of Mastology and recognized as a member of the Breast Centers Network, we participate in multidisciplinary care for the treatment of breast pathologies.

Treatments and Medical Quality unique in Argentina

In IAF we have mini-invasive surgeries and innovative treatments for patients, whereas only 2 institutions in Latin America have this training, us being one of them.

AT IAF WE OFFER

SCRENNING, DIAGNOSIS, TREATMENTS AND FOLLOW-UPS

GLOBAL IAF

Connecting knowledge, expertise, and excellence in oncology worldwide.

Global IAF is an international area dedicated to patient care, medical collaboration, and academic cooperation. Created to strengthen strategic partnerships, it fosters the exchange of knowledge and advances comprehensive cancer care across the region.

We connect hospitals, clinics, healthcare organizations, academic institutions, and international insurance providers with a shared goal: advancing excellence in oncology care, professional education, and research.

We accompany international patients throughout their entire care journey—from the initial coordination before traveling, through their stay in Buenos Aires, and continuing their follow-up after they return to their home country—ensuring seamless communication and continuous support from our multidisciplinary team at every stage of treatment.

Through Global IAF, we reaffirm our commitment to excellence in oncology by fostering international collaboration, strengthening institutional partnerships, and promoting the exchange of knowledge to improve patient outcomes and advance cancer care worldwide.

SCREENINGS

We provide the option of performing routine annual checkups through some of our featured Screening programs.

- One Day – A program thought for Women Care
- Early Lung Cancer Prevention Program
- Prostate Cancer Early Detection Program
- Colon Cancer Screenings

IAF GENETIC CENTER

Between

5% & 10%

of all cancer diagnoses are due to inherited genetic mutations.

This means that about 50 to 100 out of every 1000 cases of cancer have an inherited component.

Decision making based on accurate data and information is crucial to provide a better future and quality of life for the patient. Therefore, at IAF we have different genetic tests among which we highlight:

HEREDITARY CANCER TEST

These are tests that analyze the DNA of a blood or saliva sample to detect mutations in genes that increase the risk of developing certain types of cancer, such as breast, ovarian, prostate, or colon cancer.

TUMOR DNA TEST

It studies the piece of tumor that has been biopsied to allow greater precision in the choice of the treatment to be performed.

PROSIGNA TEST
by ARGENETICS

Enables analysis of early-stage breast cancer by providing information on the risk of metastasis, and gives the proper feedback on which treatment should be best.

In addition, we offer:

- Sample security
- Confidentiality of genomic data
- Alliances with prestigious partners
- State-of-the-art technology for more accurate results.

DIAGNOSTIC IMAGING

In IAF we realized:

- Magnetic Resonance Imaging
- Computed Tomography
- Digital Mammography
- Ultrasound and Doppler Ultrasound
- Bone densitometry
- Direct digital radiology
- Diagnostic and therapeutic image-guided interventionism (punctures, drains, marklings, blocks, mini-invasive treatments, etc.).

MAGNETIC RESONANCE IMAGING (MRI)

NEW MAMMOGRAPHY
Senographe Pristina™ Mammography system
GE HealthCare

NUCLEAR MEDICINE

Molecular Imaging and Metabolic Therapies
At IAF we perform:

- Positron Emission Tomography (PET/CT).
- SPECT and Bone and Cardiac Scintigraphy, etc.
- Metabolic Therapies with Radioisotopes.

DAY HOSPITAL

Our Day Hospital is a space carefully designed to provide our patients with the best integral medical care and maximum comfort during their chemotherapy treatments.

21
Private service boxes with advanced modern chairs

14
Hours of continuous attention

Tablets & TVs for entertainment: Netflix, Spotify, Games and more!

We prioritize the patient's well-being by providing medical excellence in a warm and welcoming environment.

RADIOTHERAPY

Our **Radiotherapy Department** is integrated with the highest technological quality and professionals of great experience and international recognition.

We perform the following treatments:

- Three-dimensional Conformal Radiation Therapy (3D-CRT).
- Intensity Modulated Radiation Therapy (IMRT)
- Image Guided Radiation Therapy (IGRT).
- Stereotactic Body Radiotherapy (SBRT).

SURGERIES & SURGICAL PROCEDURES

We perform different types of surgeries and mini-invasive procedures, unique in South America.

+9.000

Surgeries performed every year

SURGERIES

- Abdominal Surgery
- Head and Neck Surgery: Otorhinolaryngology
- Oncogynecologic and Mastology Surgery
- MOHS and Cutaneous Oncology Surgery
- Orthopedic and Traumatology Surgery
- Plastic Reconstructive Surgery
- Thoracic Surgery
- Urological Surgery
- Vascular Surgery and Regional Therapies
- Neurosurgery
- Peripheral Vascular Surgery

MINIMALLY INVASIVE OUTPATIENT PRACTICES

- Video endoscopy (VEDA)
- Video colonoscopy (VCC)
- Endoscopic retrograde cholangiopancreatography (ERCP)

MINI-INVASIVE SURGERIES

The **Endovascular Therapeutics and Interventional Oncology Service of the IAF** is one of the **only ones in South America that performs mini-invasive surgical** procedures.

A "**mini-invasive procedure** " or minimally invasive surgery **is a medical technique performed to diagnose or treat a disease with the least amount of tissue damage possible.**

Among our outstanding equipment, we have a highly complex operating room equipped with robotic angiotomography. In this mini-invasive procedure, we perform a noninvasive surgery, a **medical technique without surgical opening,** by means of direct punctures through the skin reaching the tumor or through the arteries that irrigate the tumors.

Minimally invasive surgeries offer several benefits:

- Early recovery
- Less postoperative pain and smaller scars.
- Shorter hospital stay compared to traditional surgeries.

It is important to consider this mini-invasive procedure as one of the four pillars in the treatment and care of oncology patients, **along with clinical oncology, surgery and radiotherapy.**

Mini-invasive surgical procedures can be performed in different types of cancer:

- **Pulmonary Thermal Ablation** for the treatment of ***pulmonary metastases.***
- **Hepatic Radioembolization** for the treatment of ***primary and secondary tumors affecting the liver.***
- **Isolated Hyperthermic Limb Infusion,** for the treatment of ***relapses after melanoma surgery.***

As a leading institution dedicated exclusively to the care of oncology patients, we know that this new mini-invasive and superior treatment offers a useful and effective solution for patients with different types of cancer, and we are the only few ones to offer this procedure in South America.

HOSPITALIZATION

We offer comfortable rooms, 24-hour medical assistance, quality and safety for the patient.

Testimonials from Our Patients

Romina Rigotti

"Eternally grateful. They are of excellence.... Day Hospital, Imaging, Lab, OR, Doctors, Nurses...thank you forever!!!"

"Thanks to everyone at the IAF from those who greet you at the door to the great team of professionals."

Ro Famularo

Natalie & Tim

"We were recommended to the Alexander Fleming Institute in Buenos Aires. Here we found a very modern clinic, in some points more modern than some German hospitals.

As our main contact person, we had an English-speaking doctor and specialist, who guided us through the studies, and gave us the same information about the pathology and aftercare as the German doctors. The final report was even written in English, something that was not possible in Germany. In an online portal, we were able to see all the results and send them to Germany, including the CT scan and ultrasound images.

We were very impressed by the friendliness and assistance of the whole team, the fast and easy process and the technical quality.

We felt very well taken care of and were very satisfied. By the way, all the tests for suspected cancer were negative and we were able to continue our journey calm and relaxed."

CONTENTION
Psycho-Oncology Service and Wellness Space

At IAF we have a Psycho-Oncology Service integrated by professionals trained in the psychotherapeutic approach to cancer.

The Psycho-Oncology Service offers various workshops for patients. Among the topics are Mindfulness, Yoga, Breathing Techniques and Narrative, among others.

Within this framework, we offer a "Wellness Space" for the patient that carries out activities and workshops aimed at emotional and psychological support.

We also have the "Wellness Stand", a physical space at the entrance of Cramer 1180 to attend to all patients' queries and update them on the institute's activities and news.
